Excerpt: .further assume that the key to Apollonius solution is to be found in the third Book, and it is therefore necessary to examine the propositions in that Book for indications of the way in which he went to work. The three-line locus need not detain us long, because it is really a particular case of the four-line locus. But we have, in fact, in Ili. 53-56 Props. 74-76 what amounts to a complete demonstration of the theoretical converse of the three-line locus, viz. the proposition that, if from any point of a conic there be drawn three straight lines in fixed directions to meet respectively two fixed tangents to the conic and their chord of contact, the ratio of the rectangle contained by the first two lines so drawn to the square on the third line is constant. The proof of this for the...
